

## **ANCIENT ASTRONAUT THEORISTS CHALLENGED**

**By James Collins**

**The H2 cable channel presents the series 'ancient aliens'. Several of the personnel associated with this presentation refer to themselves as ancient astronaut theorists. This show takes the viewer's back to ancient civilizations and shows them stone ruins created using unknown and unusual construction processes. It is obvious that the civilizations, which existed at that time, created these, although at present we do not know how they generated these marvels. However, in every instance, our self-ordained theoreticians immediately jump to the premise that ancient astronauts arrived and showed or assisted the civilizations with construction using ancient astronaut technologies. This is the recurring theme of the show and of the ancient astronaut theorists. They presume that our ancestors were not as smart or creative as the present generations. However, every technology and science we have arose from the work they did before us.**

**I present these questions to the theorists. James Watt created the steam engine back in 1765. This became the basis of the Industrial Revolution and that invention by itself was the basis for all the railroads that crisscross the world to this day. Where or when did the astronauts arrive to give him this technology?**

**In 1903 the Wright brothers invented the airplane. Where or when did the astronauts arrive to give them this technology?**

**In 1908, Einstein created the theory of relativity. Where or when did the astronauts arrive to give him this technology?**

**In less than 100 years from the invention of the aircraft, our civilization has airlines crossing the globe and interconnecting every aspect of life. We have satellites surrounding the planet running a massive communication system and GPS. We landed on the moon. We have sent robots and satellites to various planets and we have circumnavigated our own planet innumerable times. We are present day astronauts.**

**If you want the public to believe, your outlandish statements about ancient astronaut technology I ask you to respond to this question.**

**As you all are relatively intelligent people and belong to the race of present astronauts, when did you last have an interactive conversation with other creatures on this planet? You can select dogs, horses, pigs, cats, dolphins, and whales, whatever. You have knowledge of unbelievable technologies of which these creatures are unaware. When did you last sit down with a group of dogs for instance have an interactive conversation with them and teach them how to start a fire or build a simple brick? You should also try to teach them how to write and since it would be of immense use to them, you should teach**

**them how to dig up the land and plant a seed. You are effectively modern-day astronauts with unbelievable advanced technologies. In addition, if the ancient astronauts were able to develop and deliver these technologies you should be able to do the same to the other creatures of Earth.**

**Once you have been able to demonstrate that you can teach lower beings how to do things using your advanced technology others of us could believe your outlandish claims about technologies being handed down by ancient astronauts.**

**Until then you are amusing, outlandish, entertaining, hucksters. You are the ancient flim flam entertainers and snake oil salesmen. Use your present astronaut technologies to amaze us. Until then you are just the cause of amusement and laughter. Good luck in your attempts. Waiting to hear of your success.**

**TILL THEN**
